ILIAS 3.10.
Accessibility Report

Gábor Erdélyi
Interoktat e-learning

Project background

- Project finance: EU, govermental

- Project owner: FSZK (Public foundation for equal odds of deficient peoples)

- Contributors:

  - Interoktat e-learning

  - W3C Hungarian Office

  - Learning material developers

Project goals

- Accessible e-learning LMS - ILIAS

- Usage of WCAG 2.0 W3C standard

- WCAG 2.0 "AA„ conformance level

- Accessible learning content

Procedure

- ILIAS global WCAG 2.0 analysis (W3C) – Now
    - Main user (learner) interface
    - Course and SCORM presentation
    - Global coding errors
- Correcting global accessibility errors
- Analysis of user (learner) interfaces in detail (e.g. wiki, test, etc.)
- Correcting accessibility errors (3.10 branch)

:) Outcomes :(

- Accessible ILIAS 3.10 LMS but...

- ...Code not valid

- ...Oldstable (Debian fans in favour)

- ...Only learner interfaces are accessible

- Accessible ILIAS skin (http://tudastar.fszk.hu/)

Our hopes

- Cooperate with ILIAS developers to make ILIAS future branches accessible

We can

- Provide the accessibility reports

- Provide the suggested solution

- Provide an accessible skin to ILIAS (plan)

Problems?

- Analyzed 3.10 but now ILIAS 4.0 is out

- Opinion of the ILIAS program committee – resource management between new function development and maintainance of stable vs. accessibility correction

- Optimal solution?

  - Tendering for fund and

  - Cooperation with an accessibility expert (W3C?)

Thank you for your attention...

...and let's see the details!
